

## GE7805 3-Terminal Positive Voltage Regulator

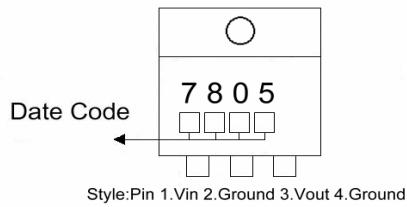

### Description

The GE7805 series of three-terminal positive regulators are available in the TO-220 package and with several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver can be used with external components to obtain adjustable voltages and currents. GE7805 is characterized for operation from 0°C to +125°C, and if operating temperature will always high, please refer the power dissipation curve.

## Typical Application

Note:

C1 and C2 are required if regulator is located far from power supply filter and load, or oscillation may induced on the loop.
