

GU7805

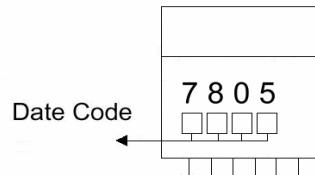

Description

The GU7805 series of three-terminal positive regulators are available in the TO-263 package and with several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver can be used with external components to obtain adjustable voltages and currents. GU7805 is characterized for operation from 0°C to +125°C, and if operating temperature will always high, please refer the power dissipation curve.
